The ResCarta Foundation

ScanDays

The ResCarta Foundation supports the creation of local cultural archives by holding events called "ScanDays".

ScanDays

The community is invited to bring historic documents, photographs, audio tapes and artifacts to be digitized and added to the local digital archive.

ScanDays

- What does it look like?

ScanDays

ScanDays

The person bringing in materials is then given a disk containing their digital objects and a copy of the metadata worksheet.

ScanDays

ScanDays

- Creating an archive not just a website
- The idea is to capture culturally important materials before they wind up in a landfill or a garage sale. And give patrons the chance to share one of a kind items with family and the community at large.

ScanDays

- The idea is to create an archive not a website
- Metadata should be in standard formats
- Objects should be captured in high resolution
- Resulting files should be maintainable over time
- There should be discovery and display of items

ScanDays

- Metadata is added to digital files using software to create METS/MODS/MIX/AudioMD XML
- ResCarta Metadata Creation Tool captures metadata using simple forms and writes out the XML files.

ScanDays

- Objects should be captured in high resolution
- ResCarta software stores the original high resolution digital file in standard formats
- TIF for Photographs and Text information
- Broadcast WAV up to 96khz 24bit for Audio

ScanDays

- Resulting files should be maintainable over time
- ResCarta software provides checksum validation.
- By displaying directly from an archive quality file the software allows for “Crowd Validation” of the archive.
- Audio validation using the FADGII BWF MetaEdit tool

ScanDays

- Resulting files should be maintainable over time

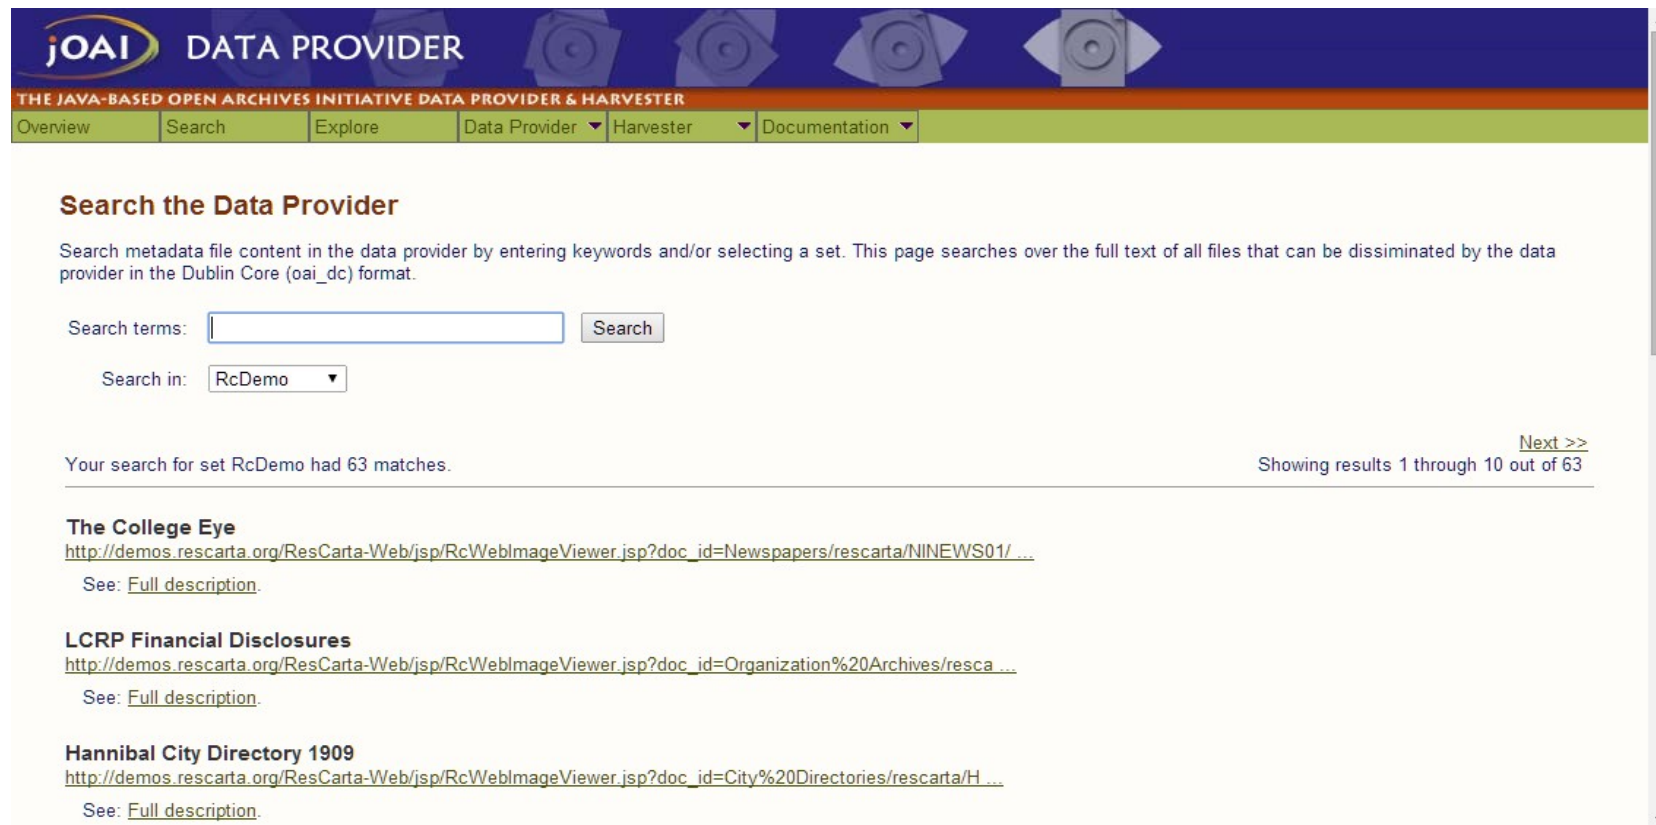

ScanDays

- There should be discovery and display of items
- The ResCarta-Web application allows for full text search of the metadata, the textural content of print items and full text search of oral histories.
- The robust METS/MODS metadata is exportable to OAI_DC for use with the jOAI metadata provider making the archive harvestable by DP.LA and others.

ScanDays

- There should be discovery and display of items

The screenshot displays the JOAI Data Provider search interface. At the top, there is a navigation bar with the JOAI logo and the text "DATA PROVIDER". Below this, a secondary bar reads "THE JAVA-BASED OPEN ARCHIVES INITIATIVE DATA PROVIDER & HARVESTER". The main navigation menu includes "Overview", "Search", "Explore", "Data Provider", "Harvester", and "Documentation".

The search results page is titled "Search the Data Provider". It contains a search form with the following elements:

- Search terms:
- Search button:
- Search in:

Below the search form, the results are displayed:
